

SOLVENT

Always read and comply with the manufacturers instructions supplied with the sprayer.

The Venus Super HD solvent line pressure sprayer from the Heavy Duty series with increased chemical resistance is intended for spraying solvents used in, among other things, garages, paint shops, at fuel stations etc. It can be used, among others with the following chemical compounds: extraction gasoline, aliphatic, aromatic and chlorinated hydrocarbons, isopropanol, ethanol, unleaded gasoline, diesel, mineral oils.

The device is fitted with FPM seals. The sprayer is not intended for contact with glycol-based brake fluids, organic acids with small molecular mass (formic acid, concentrated acetic acid), chloroacetic acid, chlorosulfonic acid, esters, aldehydes, ketones, ethers, amines, concentrated solutions of sodium and potassium hydroxide, paint solvents, ammonia, methanol, Cellosolve type solvents (such as 2-ethoxyethanol), or nitro solvents which contain acetone and toluene. The availability of various chemical agents on the market requires the user to test the sprayer with the target agent. KWAZAR CORPORATION Sp. z o.o. does not guarantee the universality of the device.
